PROGRAMMING PROJECTS

Betsy | Video demo, GitHub

PYTHON, FLASK, SQLITE, PEEWEE ORM, BULMA, CSS, HTML

- Created a multi-vendor marketplace modeled after Etsy.
- Using SQLite, modeled a database that stores a user's information, the products they sell, the tags and images associated with each product, and a user's transactions on the site.
- Implemented Peewee ORM to query and retrieve data from the database.
- Built a front-end for the application using Flask, and attempted to create a near-identical clone to the original Etsy site by using Bulma (CSS framework).

Superpy | GitHub

PYTHON

- Developed a CLI Tool, using argparse, that keeps track of a (supermarket's) inventory, and is able to produce various reports (expiration report, sales report, purchases, low stock, best selling items, etc.) for that inventory.

Student Dashboard | live demo, GitHub

REACT, REDUX, JAVASCRIPT, CSS, HTML

- Built a dashboard that displays 'how satisfied students are with the assignments they received from their university/ academy', using charts and tables to visualize the data.

Lil Playlist | live demo, GitHub
